Browser Extension / AI Product Developer

Summary

I build browser-side AI products with Chrome Manifest V3, React, TypeScript, and multi-provider model integrations. My main browser product is Nerdbot, a side-panel assistant that can work with active-page text, selected content, screenshots, local knowledge, and several cloud or local AI providers. I also build Astro web products, browser-rendering automation, and supervised agent workflows. I am a strong fit for browser-extension, AI product, developer-tools, front-end product, and browser-automation roles.

Skills

- **Chrome extensions:** Manifest V3, side panels, content scripts, active-tab context, messaging, local storage, permissions, settings and packaged builds.
- **Front-end product:** React, TypeScript, JavaScript, Vite, Tailwind, component design, responsive UI, streaming chat interfaces.
- **AI product integration:** Gemini, OpenAI, OpenRouter, Anthropic, Ollama, LM Studio, model selection, prompt workflows, RAG/search concepts.
- **Browser automation:** Puppeteer/Playwright, DOM extraction, selected text, screenshots, multi-tab context, browser rendering.
- **Privacy and reliability:** local BYOK storage, explicit context sharing, bounded workflows, human approval gates, local/cloud fallback.

Selected Work

Nerdbot — Chrome MV3 AI Browser Assistant

(<https://chromewebstore.google.com/detail/nerdbot/oegoeflmcbahliaahlameajidnhlpog>)

- Built a React/TypeScript/Vite side-panel assistant with streaming chat, local settings, chat history, pinned messages, and model/provider configuration.
- Implemented context workflows for the active page, selected text, screenshots, and multiple tabs so users can bring their current browser work into a conversation.
- Integrated Gemini, OpenAI, OpenRouter, Anthropic, Ollama, and LM Studio with fast/quality model choices and local-provider options.
- Designed BYOK privacy behavior: credentials remain local, and page context is shared only when explicitly enabled.

HTMLHub — Browser-Native Creative Code Library (<https://htmlhub.org>)

- Built an Astro 5 library of standalone HTML, CSS, Canvas, and WebGL effects that users can inspect, copy, and run in a browser.
- Implemented content collections, metadata-driven routes, category/detail pages, React islands, Pagefind search, and reusable component structures.
- Grew the product organically to 10,000 users per month with zero ad spend.

HtmlToMp4 Pro — Browser Rendering Automation (<https://htmltomp4.com>)

- Built Electron and CLI workflows that use Chromium/Puppeteer to capture HTML animation frames and FFmpeg to encode MP4/WebM.
- Implemented configurable duration, frame rate, resolution, batch processing, audio muxing, and GPU-aware encoding paths.

SavvOps Automation

- Built workflows that connect Telegram, AI workers, browser tools, files, and local processes with health checks, durable state, and human review gates.

Experience

Founder & Lead Developer — Savv Studio / SavvOps

Remote | January 2023 – Present

- Build browser extensions, web products, automation tools, and AI-assisted interfaces from concept through working MVP.
- Own front-end architecture, provider integration, local state, workflow design, testing, documentation, and deployment.
- Translate repeated browser work into products and supervised automation instead of one-off scripts.

Customer Technical Support & Operations Representative — IntouchCX

Remote / Winnipeg, MB | March 2025 – May 2026

- Supported assigned client programs through chat, phone, ticketing, escalation, and documented quality processes.
- Developed strong habits around user communication, reproducible troubleshooting, and safe escalation.

Education

Bachelor of Science in Mathematics and Physics

University of Manitoba, Winnipeg, MB | May 2023
