AI Automation & Integration Developer

Summary

I build practical automation systems that connect AI models, APIs, messaging, browsers, and local tools. As founder of Savv Studio / SavvOps, I have shipped Telegram-controlled agent workflows, n8n integrations, a multi-provider browser assistant, commercial web products, and human-approval gates for consequential actions. I am strongest in the integration layer: turning an unclear operational problem into a bounded workflow that runs, reports evidence, and stops safely when human input is required.

Skills

- **Automation:** n8n, REST APIs, webhooks, scheduled jobs, Telegram bots, workflow state, retries, approval gates.
- **AI integration:** OpenAI, Anthropic, Gemini, OpenRouter, Ollama, LM Studio, prompt design, model routing, RAG concepts, local/cloud fallback.
- **Development:** TypeScript, JavaScript, Python, React, Astro, Node.js, HTML/CSS, SQL basics, Git/GitHub.
- **Browser and desktop:** Chrome Manifest V3, Puppeteer/Playwright, Electron, page-context extraction, file and process automation.
- **Cloud and operations:** Cloudflare Pages and Workers/KV concepts, Vercel, Docker basics, Linux/WSL, logging, human-in-the-loop QA.

Selected Work

SavvOps Agent and Automation Systems

- Built Telegram-controlled workflows connecting AI providers, n8n, browser tools, local files, and process operations for research, task routing, reminders, summaries, and operational assistance.
- Designed human-approval gates so sensitive or high-impact actions stop for review instead of executing blindly.
- Built durable job-state patterns with checkpoints, bounded retries, evidence, health reporting, scheduled work, and recovery after interrupted processes.

Nerdbot — Chrome MV3 AI Browser Assistant

(<https://chromewebstore.google.com/detail/nerdbot/oegoeflmcbahliaahlameajidnhlpioq>)

- Built a React/TypeScript/Vite side-panel assistant that can use active-page content, selected text, screenshots, and multi-tab context.
- Integrated Gemini, OpenAI, OpenRouter, Anthropic, Ollama, and LM Studio with switchable model modes and streaming responses.
- Designed privacy-aware BYOK behavior where credentials remain local and page content is shared only when enabled by the user.

HtmlToMp4 Pro (<https://htmltomp4.com>)

- Built an Electron and CLI workflow that converts HTML/CSS/JavaScript animations into MP4/WebM using Puppeteer and FFmpeg.
- Designed batch processing, configurable output, GPU-aware encoding paths, machine activation, and Gumroad-to-Cloudflare licensing concepts.

Client Web Systems (<https://savvstudio.com/work>)

- Build and maintain web and automation systems for small businesses and nonprofits, including Vanity Hair WPG (<https://vanityhairwpg.ca>) and DPTF Foundation.
- Translate business requests into scoped websites, intake flows, integrations, and repeatable operating procedures.

Experience

Founder & Lead Developer — Savv Studio / SavvOps

Remote | January 2023 – Present

- Build AI automations, browser tools, web products, internal systems, and client solutions from requirements through verification.
- Connect messaging, APIs, model providers, browsers, Cloudflare services, and local tooling into supervised workflows.
- Document constraints, failure paths, and approval boundaries so systems remain understandable and recoverable.

Customer Technical Support & Operations Representative — IntouchCX

Remote / Winnipeg, MB | March 2025 – May 2026

- Supported assigned client programs through chat, phone, CRM/ticket workflows, escalation paths, and quality requirements.
- Used clear written communication and structured troubleshooting in a high-volume remote environment.
- Role ended when the client program shut down; available immediately.

Education

Bachelor of Science in Mathematics and Physics

University of Manitoba, Winnipeg, MB | May 2023
