Solutions Engineer / Technical Consultant

Summary

I work between the business problem and the functioning system. As founder of Savv Studio / SavvOps, I scope requirements, compare technical trade-offs, build prototypes, connect integrations, and support deployed products. My projects include production client websites, a commercial Electron/CLI product, a multi-provider browser assistant, and supervised AI automation. Combined with remote customer-support experience, this gives me a practical foundation for solutions engineering, technical consulting, implementation, pre-sales, and customer engineering roles.

Skills

- **Discovery and solution design:** requirements gathering, workflow mapping, MVP scoping, trade-off communication, architecture diagrams and implementation planning.
- **Integration:** REST APIs, webhooks, n8n, model-provider routing, Telegram, browser workflows, payment/licensing flows.
- **Web and cloud:** Astro, React, TypeScript, Cloudflare Pages and Workers/KV concepts, Vercel, Docker basics, Git/GitHub.
- **Product surfaces:** Chrome MV3 extensions, Electron applications, CLI tools, websites, forms, chat and messaging interfaces.
- **Customer-facing delivery:** demos, walkthroughs, technical troubleshooting, onboarding concepts, CRM/ticket workflows, escalation discipline.

Selected Solutions

HtmlToMp4 Pro — Product and Licensing Architecture (<https://htmltomp4.com>)

- Built an Electron and CLI product that renders HTML/CSS/JavaScript animations to MP4/WebM with Puppeteer and FFmpeg.
- Designed the purchase-to-activation path using Gumroad webhook and Cloudflare Workers/KV concepts, machine activation, validation, and administrative workflows.
- Balanced browser rendering, local resources, output quality, licensing, and a practical Windows distribution path.

SavvOps — Supervised AI Automation

- Built a Telegram-controlled automation environment connecting AI workers, n8n, browser tools, local processes, health checks, scheduled work, and durable job state.
- Designed explicit approval and evidence boundaries so consequential actions remain supervised and failures remain recoverable.
- Support multiple AI providers and local models without binding the workflow to a single vendor.

Nerdbot — Multi-Provider Browser Assistant

(<https://chromewebstore.google.com/detail/nerdbot/oegoeflmcbahliaahlameajidnhlpog>)

- Built a Chrome MV3 side-panel product that combines page context with six AI-provider options and local BYOK settings.
- Designed provider abstraction, context controls, local state, and privacy behavior around an everyday browser workflow.

Client Systems in Production (<https://savvstudio.com/work>)

- Discover, scope, build, and support websites and digital workflows for small businesses and nonprofits.
- Current work includes Vanity Hair WPG (<https://vanityhairwpg.ca>), DPTF Foundation, and HTMLHub (<https://htmlhub.org>), which serves 10,000 users per month.

Experience

Founder & Lead Developer — Savv Studio / SavvOps

Remote | January 2023 – Present

- Take unclear business requirements through discovery, option analysis, technical design, implementation, verification, and support.
- Explain choices and constraints to non-technical stakeholders, then build the selected path.
- Own browser, web, automation, AI-provider, deployment, and local-process integrations across several products.

Customer Technical Support & Operations Representative — IntouchCX

Remote / Winnipeg, MB | March 2025 – May 2026

- Supported assigned client programs through chat, phone, CRM/ticket workflows, escalation paths, and quality requirements.
- Explained issues and next steps clearly to customers under time and process constraints.
- Role ended when the client program shut down; available immediately.

Education

Bachelor of Science in Mathematics and Physics

University of Manitoba, Winnipeg, MB | May 2023
