Full-Stack JavaScript / TypeScript Developer

Summary

I build web products from the interface through the integration and deployment layers. My work includes a published Chrome AI assistant, an Electron/CLI media product, Astro content platforms, serverless licensing concepts, AI-assisted batch tools, and production websites for small businesses and nonprofits. I work mainly with TypeScript, JavaScript, React, Astro, Node.js, Cloudflare, browser automation, and Python. My customer-support experience at IntouchCX also shaped how I debug, document, and build workflows that make sense to the person using them.

Technical Skills

- **Front end:** TypeScript, JavaScript, React, Astro, HTML, CSS, Tailwind CSS, Vite, responsive interfaces, reusable components, content collections, and streaming UI patterns.
- **Back end and integrations:** Node.js, Python, REST APIs, webhooks, n8n, Cloudflare Workers/KV concepts, Supabase client libraries, SQL basics, local storage, IndexedDB, and third-party API integration.
- **Browser and desktop:** Chrome Manifest V3, content scripts, side panels, Puppeteer, Playwright, Chromium rendering, Electron, Tauri build workflows, FFmpeg, file workflows, and packaged Windows applications.
- **Cloud and delivery:** Cloudflare Pages, Vercel, Cloudflare Tunnels, Git/GitHub, Docker basics, Linux/WSL, domains, deployment troubleshooting, and technical documentation.
- **AI product integration:** OpenAI, Anthropic, Gemini, OpenRouter, Ollama, LM Studio, provider abstraction, streaming responses, prompt workflows, RAG/search concepts, and BYOK settings.
- **Product work:** requirements discovery, MVP scoping, interface and workflow design, debugging, error handling, testing, documentation, customer support, and ongoing maintenance.

Selected Engineering Work

HtmlToMp4 Pro - Full-Stack Desktop, CLI & Licensing Product (<https://htmltomp4.com>)

- Built a working Electron and CLI product that converts HTML/CSS/JavaScript animations into MP4/WebM through Puppeteer-driven Chromium capture and FFmpeg encoding.
- Implemented configurable duration, resolution, frame rate, output format, external audio, parallel batch processing, and GPU-aware encoding paths for NVIDIA, AMD, Intel, and CPU fallback.
- Designed the application flow from user configuration and local file handling through browser rendering, frame processing, encoding, progress reporting, and output delivery.
- Designed a trial and paid-license backend path using Cloudflare Workers/KV concepts, machine activation, validation, administrative actions, and Gumroad webhooks.
- Prepared the product for Windows x64 packaging with Electron Builder and bundled rendering/encoding resources.

Nerdbot - Chrome MV3 AI Product (<https://chromewebstore.google.com/detail/nerdbot/oegoeflmcbahliaahlameajidnhpiog>)

- Built and published a React/TypeScript/Vite side-panel application with streaming chat, local settings, chat history, pinned messages, model configuration, and packaged Chrome Web Store delivery.
- Implemented page-context workflows for active-tab content, selected text, screenshots, and multiple tabs so users can bring current browser work into the assistant.
- Integrated Gemini, OpenAI, OpenRouter, Anthropic, Ollama, and LM Studio behind a provider-selection layer with local/cloud options and fast/quality modes.
- Added local knowledge/RAG concepts, custom skills, voice and image helpers, and sandboxed HTML/CSS/JavaScript preview workflows.
- Designed privacy-aware BYOK behavior: credentials remain local and page content is shared only when explicitly enabled.

HTMLHub - Astro Content Platform (<https://htmlhub.org>)

- Built and operate an Astro 5 library for reusable HTML, CSS, Canvas, and WebGL animations serving 10,000 users per month, grown organically with zero ad spend.
- Implemented category pages, effect detail routes, Astro content collections, reusable components, React islands, standalone examples, and metadata-driven routing.
- Added production search indexing with Pagefind and prepared the site for Cloudflare deployment.
- Structured the user workflow around browsing, inspecting source, copying self-contained HTML, and reusing effects in other products and rendering pipelines.

LLM-to-HTML Batch Generator

- Built a React, TypeScript, and Vite prototype that generates batches of self-contained HTML assets from LLM prompts.
- Added Google GenAI integration, local persistence, preview and review workflows, regeneration, ZIP export, and a Tauri desktop build path.

Client Websites & Web Systems (<https://savvstudio.com/work>)

- Build and maintain responsive, production websites for small businesses and nonprofits using Astro, Tailwind, Cloudflare Pages, Vercel, Git/GitHub, structured content, and conversion-focused service pages.
- Current and completed work includes Vanity Hair WPG (<https://vanityhairwpg.ca>), DPTF Foundation (<https://drtsavnandefoundation.com>), Savv Studio, and related internal/client workflows.
- Translate business requests into information architecture, reusable page structures, mobile-friendly interfaces, forms and intake paths, deployment plans, content handoff, and ongoing troubleshooting.

Experience

Founder & Lead Developer - Savv Studio / SavvOps

Remote | January 2023 - Present

- Build web applications, browser extensions, desktop tools, automation systems, and client websites from initial requirements through implementation, deployment, documentation, and support.
- Work across front-end interfaces, application state, provider and API integrations, browser automation, local processing, serverless concepts, and cloud delivery.
- Turn unclear product ideas into scoped MVPs, implementation plans, working releases, landing pages, operating instructions, and follow-up improvements.
- Maintain products after launch by troubleshooting browser behavior, deployments, domains, forms, integrations, content, and workflow-state problems.

Customer Technical Support & Operations Representative - IntouchCX

Remote / Winnipeg, MB | March 2025 - May 2026

- Supported assigned client programs through chat, phone, CRM/ticket workflows, escalation paths, and documented quality requirements.
- Resolved customer issues using clear written communication, process discipline, reproduction steps, and structured troubleshooting.
- Applied support experience to product development by improving instructions, error handling, intake flows, issue handoff, and the visibility of next steps.
- Role ended when the client program shut down; available immediately.

Contract Web Developer & Seasonal Operations Support - Window Guys Winnipeg

Winnipeg / Remote | Seasonal contracts, 2024 - Present

- Supported website delivery, lead generation, customer-service and sales data cleanup, and seasonal field operations.
- Improved customer-facing information and quote-request paths, and supported practical website updates during active seasons.

Customer Service Representative - 24/7 Intouch, Lyft Support

Winnipeg, MB | November 2017 - April 2019

- Resolved rider and driver inquiries through email and phone while following CRM/ticketing, escalation, and service-quality procedures.
- Documented issues, communicated next steps, and maintained service consistency in a high-volume environment.

Education

Bachelor of Science in Mathematics and Physics

University of Manitoba, Winnipeg, MB | May 2023

Relevant study: data analysis, linear algebra, statistics, computational programming/Python, mathematical modeling, and physics problem-solving.
